regulation of transcription, DNA-templated
negative regulation of transcription by DNA
nucleic acid phosphodiester bond hydrolysis
positive regulation of hematopoietic stem cell
positive regulation of histone H2a gene
positive regulation of histone H2b gene
intracellular protein catabolic process
oxidation-reduction process
negative regulation of apoptotic process
RNA-dependent DNA biosynthetic process
positive regulation of mast cell activation
positive regulation of mast cell activation
interleukin-7-mediated signaling pathway
multicellular organismal development
steroid metabolic process
cellular response to hydrogen peroxide
positive regulation of signal transduction
cellular response to oxygen
regulation of response to oxidative stress
mRNA splicing, via spliceosome
vesicle-mediated transport
cellular response to leukemia inhibitory factor
positive regulation of transcription, DNA-templated
positive cellular response to hypoxia
positive regulation of collagen biosynthetic process
positive regulation of neuron development
positive regulation of neuron development
positive regulation of testosterone secretion
positive regulation of cell differentiation
positive regulation of hepatic stellate cell
positive regulation of glial cell

6
